

Part # LED5500-X, 12/24VDC Multi-Function, High Power LED Technology, Wide Angle, All-Aluminum Housing, Waterproof Flashing Lamp with 5 user selectable patterns.

Box Content:

- LED5500-X LED Multi-Function Lamp
- Instruction

Installation:

- Bench testing of the LED5500-X is recommended, see operation instructions below.
- Locate an appropriate place for the unit installation and drill a minimum 1/4" diameter hole in the mounting surface, lining up the wire exit hole with the surface hole to be drilled.
- Feed the power wires toward the power source (On/Off switch) thru a minimum 3A fuse and connect the red wire to the positive terminal and the black wire to the negative terminal or chassis for ground respectively.
- If you plan on having two LED5500-X communicate and flash in a synchronized pattern, link the two white wires exiting the rear of the LED5500s with a user supplied wire.
- NOTE: Each LED5500-X requires an individual source for power and ground.
- Use two #8 sheet metal screws to affix the unit in place.

Operation:

- Power up the unit. The unit will display one of several pre-programmed patterns.
- To change the pattern, touch the two green wires for one second and the pattern will change.
- NOTE: For two units to communicate, first get both units on the identical flash pattern.
- For a synchronized flash pattern, connect two units together with a user supplied wire connected to both white wires out the back of the LED5500s.

Note: Do not attempt to change a flash pattern while units are synchronized

Optional Accessories:

- Universal L-shaped mounting bracket (part # LED5/3-BKT)
- "U" mount "Bale" bracket (part # LED5K-BKT)
